

Ques 4

A lot of free password managers are really Bad. Some of them are super buggy. Some of them are ineffective and some of them are actually just ~~inf~~ spyware disguised to steal all of your passwords. And built in password managers from apple and chrome might be convenient.

But they don't have high levels of security and they don't offer multi-platform, supports.

Many of the best passwords managers offer free versions, But most of them hit you with so many pay walls that they basically become useless. The unfortunate truth is that if you're looking for the best features, the strongest security protection, and the most helpful customer supports, you will have to spend a little bit of cash.

Personally, I would never leave my sensitive data on a free password managers. If you are like me and owned don't want to deal with the hassles and limitations of a free password

managers. A low cost premium password manager like dashlane is always the better choice.

However, there are some really good free password managers which offer powerful password security, good user interfaces, and some nice extra features. I spend the last month testing out free password managers on my PC, iPhone, MacBook, Android to find best free password managers in 2021.
