Ans Password management is the process of storing and managing passwords as much as they can prevent unauthorized access.

Need for password management →

- ① Data breach
- ② Sniffing attack
- ③ Brute force attack etc.

How to stay secure →

- ① Create a password having more than 7 characters, it should also have special characters and numbers.

tool → One last pass, allow you to use strong and randomly generated password or a website.

- ② Don't use the same password for more than website or account.
- ③ Change your password frequently.
- ④ Don't use passwords that are easy to guess for eg date of birth, name etc.

Before using any public system →
