Answer)

Password Management are a set of string provide by users at the authentication prompts of web accounts.

Although passwords still remains as one of the most secure methods of authentication available to date, they are subjected to a no. of security threats when mis-handled.

Password Management using free online tools:-

Password manager is a computer program that allows users to store generate and mange their password for local application and online services

Types of password manger includes:

- locally installed software application
- Online services accessed through website portals.
- locally accessed hardware devices that serve as keys.

The Advantages of password-based access controls is that they are easily incorporated in most software using APIs available in many software products.

* Simple password
* password other can find
* the same password
* shared passwords
* Administrative accounts login where limited logins would suffi or
* Administrative who allows users with the same role to use the name password.
