Ans 4. Password Management

Password are a set of strings provided by users at the authentication prompts of web accounts. Although Passwords still remain as one of the most secure Method of authentication avalable to data, they are subject to a number of security threats when mishandled. The role of password management comes in handy there. Password mangemet is a set of Principles and best pratices to be followed by users while sharing storing and managing passwords in an efficical manner to secure password as much as they can to prevent authorized access.

○ LastPass Free is my favorite free password manager, ing
  Password auditing
  2FA Compatibility
  Built-in authenticator
  one-to-one sharing

○ Avira Password Pass Manager Free
  It allows user to sync unlimited passwords across unlimited devices with the free version.

In term of security, Avira Password Manager provides all user protection that I would expect from a top-quality password manager.

◎ Robo form

RoboForm is easy to use and it has the best form filler around, which consistently auto fill both simple and complex web for form without error.
