Q4/Ans

There are many challenges in securing passwords in this digital era. When the number of web services used by individual are increasing year - over - year on one end, the number of cyber crimes is also skyrocketing on the other end.

Here are four common threats to protecting our password:

Login Spoofing :- Password are illegaly collected through a fake login page by cybercriminals.

Sniffing attack :- Password are stolen using illegeal network access and with tools like key loggers.

Shoulder surfing attack :- Stealing password with the help of automated tools and gaining access to user data.

Data breach :- Stealing login credential and other confidential data directly from the website database.
